

# MEET THE MAILBOX OF TOMORROW

**Parcel delivery,  
the easy way**

[www.cipiobox.nl](http://www.cipiobox.nl)

# READY FOR THE NEW STANDARD

E-commerce continues to grow and the ease of home delivery is becoming the norm. While the volume of letter post has been decreasing for years, the number of parcels that we have delivered at home or at the office is going through the roof (partly due to corona). This growing parcel flow however, is accompanied by new challenges, especially for tenants and owners of residential or business complexes.

Clearly most packages will not fit in a letterbox. Recipients are then obliged to wait to receive their parcel, but that leads to additional issues. In practice neighbors are often rung, but you cannot expect them to keep that up. And while delivery drivers do their

best to deliver their loads quickly, various delivery vans are frequently parked in front of your entrance.

That can all change with the CiPiObox!

**No more waiting  
on your parcel**

# WHAT IS A CIPIOBOX?

Also fed up with the hassle of parcels in your complex? CiPiO can solve it with the smartest solution around: the CiPiObox.

With a CiPiObox you receive your parcels the easiest imaginable way, regardless the delivery service! It is like your own parcel agent available 24/7. Our parcel machine brings convenience and peace-of-mind. At the same time, it contributes to a more sustainable and safer world.

A neat entrance is  
the calling card for  
your visitors

# BENEFITS

Do you have a minute? Because the CiPiObox offers more than you expect!

You never have to wait for your parcel; pick it up at your convenience

Your neighbors or building manager will not be bothered to accept parcels for others

Your parcel privacy is maintained

Assured your package was delivered

No more searching delivery agents in your building

Less traffic movement because the first delivery attempt is successful

Contactless deliveries, so corona-proof

A neat, modern entrance without parcels lying around

Take control of your  
parcel delivery

- 3 We set up secure user management with you and get those parcels coming!

**First month for free,  
and termination allowed  
monthly!**

**Rock-solid  
Dutch solution**

# THE CIPIOBOX CAN BE USED:

## **For living**

The growing convenience of home delivery unfortunately also creates the necessary challenges and irritations for residents of apartment buildings. The uncertainty of whether and how your package will be delivered, neighbors who are bothered to accept parcels for others, the feeling of insecurity because of strangers in the building. Unfortunately all things often recognizable for residents of apartment buildings, regardless of age.

Owners associations, developers, housing corporations or building managers who take these problems seriously and are looking for a professional solution and choose the future-proof CiPiObox. In addition, the CiPiObox fits perfectly within important current themes such as sustainability and liveability of (inner) cities and living independently longer for the elderly.

## **For working**

Multi-tenant business buildings are on the rise and have a special dynamic. Several companies are housed under the same roof. Their image and job satisfaction strongly depend on the appearance and facilities offered. Satisfied tenants are also loyal

tenants. Both tenant and owner therefore benefit from a well-kept entrance, where you won't stumble over parcels that are an eyesore. The CiPiObox then provides a modern and professional calling card. We also see more and more companies using a CiPiObox as an incentive for their staff. In this way, employees can easily have parcels arrive at work, and they do not have to rush or detour on the way to or from work. Simply placed at a central location in the company building, it also offers opportunities to exchange (corona-proof) business with colleagues.

## **For Business**

The applications of the CiPiO parcel machines are endless. With our smart parcel machines we offer completely new possibilities to serve customers. This can be done with our standard modules or even with customization. We have the knowledge and experience to take care of the entire process, from idea to full operation!

This is how you can encounter our CiPiObox at, for example, shops, pharmacies, libraries or supermarkets. But our best-known parcel machines are of course those of PostNL.

# WHY THE CIPIOBOX?

## White label

We deliver on what many promise, namely that all delivery services can deliver to our parcel machines. And to prevent abuse of the machine, we even validate whether the addressee actually belongs to the address before the package can be placed in a locker. But if, for example, a sofa is delivered, the delivery agent will still have to do it the old way and has to ring the bell...

## Modular construction

All CiPiO boxes are built modularly. The larger your complex and the more parcels, the more modules you connect. In addition to the technical module, in which our software runs, you can easily choose which standard modules should be added. We have a clever division of available partitions for each module. And if you become short after a period of time, we will simply expand your machine with extra modules.

## Pricing

We don't like surprises when it comes to pricing. That is why we offer the simplest pricing model we could think of, namely a rental price per month. This is, of course, dependent on the number of columns chosen. The first month is free and allows users to get as excited about the CiPiObox as we are!

Packages delivered  
simply, reliably and  
safely

RAL 9006

RAL 7016

RAL 9010

And because we are so convinced of our parcel lockers, you are not bound to long-term contracts. Termination is even possible per month!

A rental contract with CiPiO always includes a service contract. This means that we are always available in the event of malfunctions or damage and, if necessary, we will come by as soon as possible to solve it.

### Technics

We can say that at CiPiO, including the PostNL lockers, we have the most experience in the Dutch parcel machine market. We have been handling large volumes of parcels every day for a long time and our software has proven itself extensively when it comes to customer-friendliness, reliability and security. Parcels can be easily processed both via app and screen.

### Security

Our high-quality machines are constructed from galvanized steel, are burglar-resistant, fireproof and equipped with a powder coating on the outside. All our parcel machines are equipped with lighting and are optionally supplied with a security camera. Where delivery agents at apartment buildings now still have to ring the bell outside (and often do so to be able to enter), CiPiO optionally offers the technology to also open the outside door.

The agent receives a one-time, registered access to the complex to deliver his package in the CiPiObox.

### Colors

The modules of the CiPiObox are supplied in three powder coating colors as standard:

- RAL 9006
- RAL 7016
- RAL 9010

With these neutral color schemes, it fits into the entrance of any existing or new complex. By adding a small surcharge, prints of your own design or, for example, a wood grain motif are even possible.

- ✓ High-quality, burglar-resistant, metal cabinets
- ✓ Can be built modularly
- ✓ Easy to operate
- ✓ Optionally coupled with access from an outside door
- ✓ Optional with security camera
- ✓ First month free
- ✓ No high purchase costs, leased by rent per month
